Calimeter 602

The Calimeter 602 gives an instant calibration status on any DC MMA/Mig power source in compliance with IEC 60794-14 (calibration of welding equipment) and ISO 9000 (quality systems) suitable for any MMA or Mig upto 600 amps making it ideal for use on most power sources in the field. The units are arc voltage powered and can be fitted and running in minutes. Both come calibrated for 1 year, calibrations after that period can be carried out very easily due to the adjustor access holes in the front panel. Accuracy of the meters is typically better than 1%, lengthy calibration/validation procedures will be a thing of the past. The zinc plated steel cabinet is robustly constructed to withstand the toughest on-site and in-house conditions. These units are designed to give many years service.

Calimeter 602 – Plant Version

Dimensions:
Width : 250mm
Height : 150mm
Depth : 75mm
Weight : 2.4kg

The meter unit is specifically designed to be easily fixed to a separate power source using the mounting holes.

Calimeter 602 – Portable Version

Dimensions:
Width : 170mm
Height : 105mm
Depth : 155mm
Weight : 2.3kg

The meter can be positioned adjacent to the operator, particularly useful when the operator is working a long way from a power source or simply placed on top of your welder. This version is more suited for compact welders.
